

## Environmental Policy Statement

Buildings are major consumers of materials, water and fossil fuels; construction can produce significant waste; and density, land-use and brownfield requirements increasingly influence development considerations.

The Company is committed to protecting and enhancing local and global environments and to ensuring that our activities are carried out in an increasingly sustainable way. Therefore our architects and designers have a duty to design with due regard to environmental concerns and to encourage our clients to incorporate sustainable design in their projects.

Accordingly the Company has an ongoing programme to ensure that all of its offices meet the requirements of BS EN ISO 14001:2004, so that in addition to those offices that are already accredited to the standard, by the end 2009 all UK offices within the Company will be registered.

### Environmental Objectives

To meet this policy the Company has set the following environmental objectives;

#### **Legislation**

To comply with applicable legal requirements and other requirements to which the Company subscribes that relate to its environmental aspects.

#### **Emissions**

To continually seek to reduce emissions from Company premises.

#### **Transport**

To continually seek to reduce emissions from business related forms of transport.

#### **Energy**

To continually seek to reduce the Company's energy use and improve its carbon footprint. To continually review and increase the use of renewable energy.

#### **Materials**

To continually seek to reduce Company waste.  
To increase the proportion of waste sent for recycling.

#### **Suppliers**

To consider the environmental aspects of all significant purchases.

#### **Management**

To review and improve the objectives, targets, processes and effectiveness of the Environmental Management System.
